BEFIKADU SHUMET

Senior Backend Developer

SUMMARY

Senior Backend Engineer with 8+ years of experience developing scalable backend systems and cloud-native applications using Golang, C#, Node.js, and NestJS. Specialized in microservices, distributed systems, REST/gRPC APIs, event-driven messaging, SQL databases, Docker, Kubernetes, and CI/CD pipelines. Experienced across AWS, GCP, and modern DevOps practices, with additional React.js frontend experience to deliver end-to-end production-ready applications.

SKILLS

- Google Cloud Spanner
- GRPC
- Google Cloud Platform (GCP),
- Unit Testing
- Integration Testing
- PostgreSQL, MySQL, MongoDB, CockroachDB
- RabbitMQ, Redis
- Kubernetes, Docker Compose
- Terraform, Helm
- Prometheus, Grafana
- Jest, Mocha, Chai
- OAuth2, JWT
- Git, GitHub, GitLab, Bitbucket
- REST API
- OpenAI
- JIRA
- Memphis
- Minio
- Harbor
- Google Cloud Spanner
- Golang, C#
- Sqlc, Gorm
- Microservice
- TDD
- Kafka
- Stripe
- Twilio
- AWS
- Azure
- DigitalOcean
- Docker
- GitHub Actions
- CI/CD
- Ansible
- Web3
- JavaScript
- TypeScript
- Node.js
- Express.js
- NestJS
- Gin, Fiber, Echo

EDUCATION

2014 - 2018
WOLKITE UNIVERSITY
B.Sc. In Information System

WORK EXPERIENCE

MediDrive.
Backend developer
Aug 2025 - Present
USA (Remote)

- Backend Developer for a Non-Emergency Medical Transportation (NEMT) platform serving healthcare providers across the U.S.
- Developed scalable backend microservices using Golang and gRPC to support trip management, dispatching, and transportation workflows.
- Built event-driven services using Google Cloud Pub/Sub and worked with Google Cloud Platform (GCP), including Cloud Spanner Emulator.
- Integrated Stripe payment processing and optimized backend systems for scalability, reliability, and high performance.
- Collaborated with cross-functional teams to deliver production-ready features, implement automated testing, and improve system architecture.

ration and API consumption.

Tucanbit
Backend developer for iGaming project
June 2025 - Jan 2026
Spain (Remote)

- Developed and maintained backend services for an online iGaming (virtual gaming) platform using Golang.
- Implemented core game algorithms, business logic, and game state management with a focus on performance and fairness.
- Designed and integrated RESTful APIs to support real-time gameplay and frontend interactions.
- Collaborated on the React.js frontend, contributing to feature integ

Vitech Studio
Full-Stack Developer
Oct 2024 - April 2025
USA (Remote)

- Built and optimized Golang microservices, integrating Stripe, Minio, and SendGrid.
- Streamlined CI/CD workflows, reducing deployment time.
- Improved cloud infrastructure on AWS EC2 and boosted performance by 30%.
- Developed scalable APIs and backend services for high uptime and reliability.

ACIR
Backend Developer And DevOps Enginer
Jan 2023 - Jan 2025
Ukraine, Kyiv (Remote)

- Designed and implemented CI/CD workflows, reducing deployment time and improving release efficiency.
- Optimized infrastructure and resource management, boosting performance by 50% under heavy load.
- Developed and maintained scalable backend services and APIs, including NFT-related features, ensuring high uptime and reliability.
- Built and optimized backend solutions, including an Account Farm project in Golang and a CRM backend in Node.js.
- Led DevOps initiatives, enhancing automation, monitoring, and system performance.

Spark
Backend Developer
Feb 2024 - June 2024
Quatar, Doha(Remote)

- Led the development of Golang microservices with PostgreSQL and Gin, focusing on BDD. Integrated Stripe for payments and Twilio/SendGrid for notifications.
- Built and deployed CI/CD pipelines with GitHub Actions for automated testing, deployment, and post-release monitoring. Collaborated with frontend teams to deliver Swagger API docs and implement secure JWT-based authentication.

Twof Capital
Backend Developer
Jan 2021 - Jan 2024
Ethiopia, Addis Ababa

- Engineered and optimized backend services using Golang, CockroachDB, and PostgreSQL.
- Designed and maintained CI/CD pipelines with GitLab Runner, managing cloud infrastructure on Azure
- Developed containerized applications with Docker and built event-driven architectures using Kafka.
- Applied TDD and BDD practices to deliver scalable, reliable, and well-tested solutions.

PROJECTS

MediDrive **Aug 2025 - Jul 2026**

Backend Developer

- Designed and developed scalable backend microservices using Golang and gRPC.
- Built event-driven services with Google Cloud Pub/Sub and worked with GCP Cloud Spanner Emulator.
- Implemented Stripe payment processing and backend integrations for transportation workflows.
- Developed high-performance APIs and optimized backend systems for scalability, reliability, and fault tolerance.
- Collaborated with cross-functional teams to deliver production-ready features and improve system architecture.

Tucanbit **Jan 2025 - Jan 2026**

Backend Developer

- Developed and maintained backend services for an online iGaming platform using Golang.
- Implemented core game logic, business rules, and game state management with a focus on performance and reliability.
- Designed and integrated RESTful APIs to support real-time gameplay and frontend interactions.
- Collaborated on the React.js frontend for feature integration and API consumption.
- Contributed to backend architecture, testing, and performance optimization for production systems.

CRM System **Jan 2023 - Jan 2025**

DevOps Engineer and Backend Developer

- Designed and implemented a scalable backend infrastructure to handle large-scale data processing and support high availability.
- Utilized Docker, Memphis, Minio, and Github CI/CD to automate deployment and streamline system management.
- Outcome: Enabled real-time data processing, error monitoring, and seamless integration with other tools, enhancing customer management.

Spark Ecommerce **Feb 2024 - June 2024**

System Architect and Backend Developer

- Performed system analysis and gathered requirements to design the software architecture. Developed the backend with Golang, REST APIs, PostgreSQL, and integrated Stripe for payment processing.
- Outcome: Successfully deployed a robust system that powers ongoing e-commerce operations.

Ride Plus **Sep 2022 - May 2023**

Backend Developer & System Designer

- Built a robust billing platform for corporate taxi-hailing services, inspired by Uber Pay, leveraging Golang and CockroachDB for scalability.
- Designed and developed APIs and backend systems, focusing on performance and reliability. Worked closely with frontend teams to enhance integration and optimize workflow efficiency.
- Outcome: Delivered a high-performance solution that streamlined client billing and payment operations.

Inverse Payment Gateway **May 2023-Oct 2023**

Backend Developer

- Designed and implemented the backend architecture for a payment gateway with integration to banks and MasterCard for secure payment processing.
- Developed APIs, conducted testing, and collaborated with the frontend team to ensure seamless functionality and user experience.
- Outcome: Delivered a secure, high-performance payment gateway for reliable transactions.
